

Wells Fargo

Wells Fargo needed to modernize and replace its data distribution technologies for four separate banking and wealth management business lines. The purpose was to improve internal/external security and address audit/compliance findings related to data access for customers of trust, brokerage, banking, and bill pay. The solution was to deploy three Ninth Wave Platforms: Consumer and Commercial Banking, Wealth Management, and Tax Services in one fully integrated platform.

Wells Fargo, partnering with Ninth Wave, undertook this challenging replacement effort, which culminated in three silent conversions that were totally transparent to Wells Fargo clients. The implementation required replacement of four legacy systems. The areas also included database conversions, enhancements to logging/client case tools, and decommissioning of the old environment achieved without impacting the client. The project was completed on schedule, making the customers' experience with Wells Fargo better, easier and more secure.

Ninth Wave has replaced dozens of legacy data distribution platforms at numerous customers, many of which are silent conversions, and all have been error free. In addition to providing the most innovative and high-performance platforms, Ninth Wave has the unique ability to ensure the actual system implementation is flawless and without client impact. Ninth Wave takes the risk out of platform modernization.

**NINTH
WAVE**

Ninth Wave will be the go-to partner for universal financial data integration, delivering a secure, seamless and standardized information supply chain at massive scale.
